Domain Course 5 – Midterm Project

Develop a Laravel-Inertia-Vue3 application with the following requirements:

1. Database Structure

```
bidders

- id
- last_name
- first_name
- address
- email
```

```
cars

- id
- make
- model
- year
- miles
```

2. Pages & Navigation: The application will have three pages (1)Home, (2)Bidders, & (3) Cars. The Navigation for switching between these 3 pages must be implemented using templates. Whether to use top bar or sidebar is up to you. The Home page will show a simple card containing your name, course, & year. The Bidders page will show a list of card containing relevant details of the bidders. Similarly, the Cars page also show a list of cards of all the cars in the database. Both the Bidders page and the Cars page must have a search function for filtering the contents to be displayed.
